SITUATION SUMMARY

Spill: 15-4996, Sheen Incident, Santa Barbara County

On 08/25/2015 at 1229 hours the California State Warning Center (CSWC) from the National Response Center (NRC) advising of a oil sheen 30 miles in length from Santa Barbara to Point Conception offshore Santa Barbara County.

- CSWC staff contacted the reporting party who confirmed the sheen size and advised they were traveling in a pleasure craft and followed the sheen for 30 miles. Spill Number 15-4996 was generated by the CSWC and the CSWC made all pertinent notifications.
- The CSWC contacted the USCG who advised they were contacting all platforms in the area. The USCG Los Angeles plotted a 10 nautical mile (11.5 miles) sheen size.
- The USCG concluded its phone investigation of the sheen by contacting the platforms in the area. All platforms report normal operations. USCG will not be committing an air asset to investigate further at this time.

SOC Activation for California Wildfires

- The State Operations Center (SOC) is activated at Level 1.

WEATHER

WEATHER SYNOPSIS BY REGION:

NORTHERN CALIFORNIA

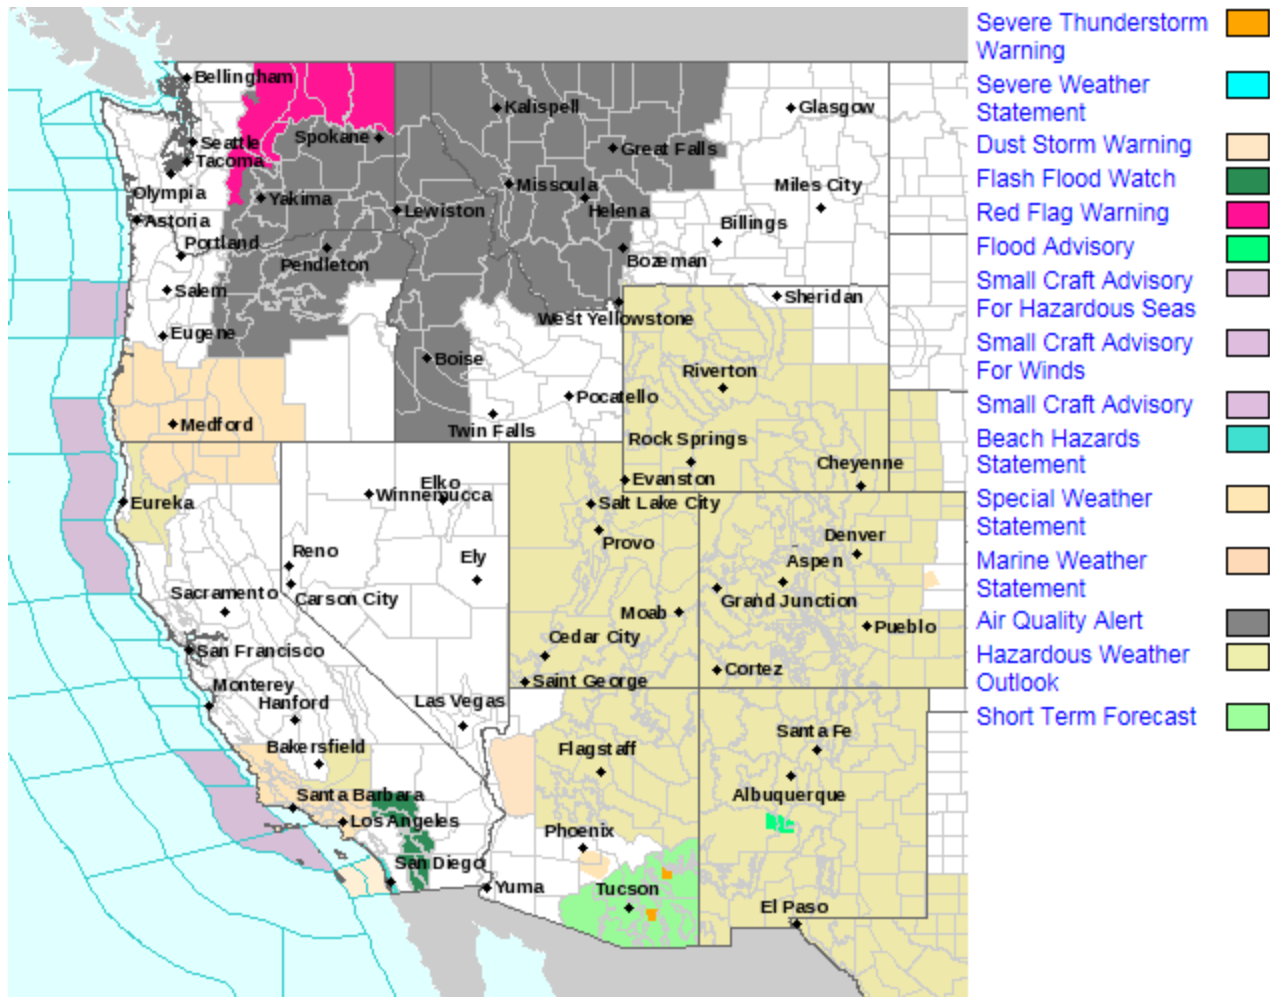

A high pressure ridge that regained strength over northern California Sunday, will hold fairly strong for a couple more days. This will keep inland max temperatures near to a few degrees above late August normals through tomorrow, while inland humidity is close to seasonal averages. There is a moderately deep marine influence along the coast, and humidity in and west of the coastal ranges will run mostly from near to 10% above average. Meanwhile, a pulse of monsoon fringe moisture will brush the southern and then eastern fringes of Northern California tonight and Wednesday, but it now looks like any thunderstorms are pretty unlikely. Also during this first half of the week, a cool, moist northeast Pacific low will be dropping slowly south, and by late Thursday it should be centered about 600 miles west of Oregon. Pressure gradients will tighten some aloft, for a gradual increase in south to west, southwest gradient winds on our mid and higher and/or exposed terrain as the week progresses. A low pressure trough is forecast to swing out from that parent low, and clip northern California late Friday and Saturday. It will cause cooling and moistening trends for especially the northwest half of Northern California. The cooling will likely total 8-16 degrees over the Friday to Sunday period. It is this system that now appears to have a good chance of producing wetting precipitation on the northern most, if not all, of the northwest California timber fires. It had looked like one or two other weather disturbances could follow the initial one this weekend, before the relatively cool, humid and unsettled pattern ended by about the middle of next week. That may not be the case, and models still varying on how moist and/or cool any follow-up might look.

SOUTHERN CALIFORNIA

A surge of "monsoonal" moisture has reached the southern part of the state, which will result in scattered wet thunderstorms today. At the current time, some convection is occurring over northern Baja and some of these storms may reach San Diego County before noon. Other areas will see convection develop during the early to mid-afternoon hours. Most of the storms will occur from Ventura and Los Angeles County southward and over the deserts south of I-15. Sufficient moisture will continue sift northward to allow for brief heavy rain to occur from all storms. The clouds may keep temperatures a bit cooler over the southern part of the state, but the rest of the area will see temperatures climb 3-5 degrees from yesterday. It will be very warm through Friday with highs generally ranging from the 80s near the coast, upper 90s to 105 in the valleys to 110 in the deserts. Minimum relative humidity will continue to be low in the Kern County Mountains and Sierras above 5,000 feet where readings will drop to 8-12% again this afternoon. Expect a modest improvement in relative humidity in these areas Wednesday and Thursday. Scattered wet thunderstorms will still be possible Wednesday, but an increase in southwesterly flow will cause most of the storms to move into the deserts by Thursday. No storms are expected Friday into the weekend. A weak trough will result in a return of cooler, onshore flow by Saturday and Sunday. It may turn breezy along the central coast this weekend into early next week.

SITUATION SUMMARY

FIRES, SOUTHERN OPERATIONS AREA

Rough, Vegetation Fire, Fresno County

Location: 5 miles north of Hume Lake and 2.5 miles southwest of Spanish Mountain

Jurisdiction: FRA

Start Time: 07/31/15 at 1933 hours

Per Cal OES, CAL FIRE, and/or ICS-209 as of 08/25/15 at 1759 hours:

- 53,208 Acres, 21% Contained

Evacuations/Shelters:

- Mandatory Evacuation Areas:
 - The Hume Lake Christian Conference was evacuated 08/18/15. Per the Cal OES Law Duty Officer (LDO) evacuation was accomplished in less than 2 ½ hours due in significant part to prior planning between Fresno Sheriff and the Camp Staff. The group of 750 to 1000 people were evacuated to a sister Church in Fresno for sheltering.
 - There are 250 mandatory evacuations in the National Park Campgrounds in the immediate area of Hume Lake Christian Camp.
 - There has been an evacuation of 32 private residences, believed to be all vacation homes in the Big Meadow and Heart Meadow Neighborhood.
 - Approximately 1,500 campers in several Kings Canyon National Park Campgrounds located along 10 Mile Rd have been placed under mandatory evacuation.
- EOC Activations: Fresno County EOC is activated at Level 2 from 0730-1800.
- The California Highway Patrol has also moved the road closure, which had been located at the intersection of Highway 180 and Hume Lake Road. The new road closure now sits further south on Highway 180 at Grant Grove Tree (approximately 2 miles north of the Hwy. 180 and Hwy. 198 interchange). The roadway will remain closed until authorities determine it is safe to reopen. The Sheriff's Office wants to make the public aware that no one will be allowed to enter the Hume Lake area; people will only be allowed to exit.
- Per CUEA, PG&E critical facilities and distribution assets are no longer in a high risk category for threats to power serving Central California. CAISO has reviewed PG&E facility locations that may be impacted by the fire and none of the locations would compromise the grid in any capacity. There would be no brownouts if these sites were impacted.
